

## Features

- Output Current of 100mA
- Thermal Overload Protection
- Short Circuit Protection
- Output transistor safe area protection
- No external components
- Package: SOT89-3 and TO92
- Output voltage accuracy: tolerance  $\pm 2\%$

## General Description

HL78Lxx is three-terminal positive regulators. One of these regulators can deliver up to 100 mA of output current. The internal limiting and thermal-shutdown features of the regulator make them essentially immune to overload. When used as a

replacement for a zener diode-resistor combination, an effective improvement in output impedance can be obtained, together with lower quiescent current.

## Pin Configuration

TO92 (Front view)

SOT89 (Top view)

### Selection Table

Part No.	Output Voltage	Package	Marking
HL78L05	5.0V	TO92 SOT89	
HL78L06	6.0V		
HL78L08	8.0V		
HL78L09	9.0V		
HL78L12	12V		
HL78L15	15V		
HL78L33	3.3V		

### Block Diagram

### Absolute Maximum Ratings (Ta=25°C)

Parameter	Rating	Unit
Input supply voltage: VIN	30	V
MAX. Output current: Iout	100	mA
MAX Power: Pmax	0.5	W
Maximum junction temperature: Tj	-25~125	°C
Storage temperature: Tstr	-55~125	°C
Soldering temperature and time	+260(Recommended 10S)	°C

Note: The absolute maximum ratings are rated values exceeding which the product could suffer physical damage. These values must therefore not be exceeded under any conditions.

### Electrical Characteristics

(Cin=0.33uF, Co=0.1uF, 0≤Tj≤125°C, unless otherwise noted)

Parameter	Symbol	Conditions	Min.	Typ.	Max.	Unit
Output Voltage	Vout	Io=40mA, VIN=10V	0.964vout	vout	1.036vout	V
		Io=1mA~40mA VIN=7V~18V	0.98vout	vout	1.02vout	
		Io=1mA~10mA VIN=10V	0.98vout	vout	1.02vout	
Line Regulation	LNR	VIN=7V~18V, Io=40mA	-150	-	150	mV
		VIN=8V~18V, Io=40mA	-100	-	100	
Load Regulation	LDR	VIN=10V, Io=1mA~100mA	-100	-	100	mV
		VIN=10V, Io=1mA~40mA	-30	-	30	
Dropout Voltage	V <sub>DIF</sub>	Tj=25°C, Io=100mA	-	2	-	V
Output noise Voltage	V <sub>N</sub>	F=10Hz to 100KHz	-	40	-	uV/Vo
Ripple Rejection	PSRR	Tj=25°C, f=120Hz, Io=40mA, VIN=8V~20V	-	80	-	dB
Quiescent Current	I <sub>Q</sub>	VIN=10V, IOUT=40mA	-	-	5.5	mA
Quiescent Current Change	△I <sub>Q</sub>	VIN=8V~18V, Io=40mA	-1.5	-	1.5	mA
		VIN=10V, IOUT=1mA~40mA,	-0.1	-	0.1	

LNR: Line Regulation. The change in output voltage for a change in the input voltage. The measurement is made under conditions of low dissipation or by using pulse techniques such that the average chip temperature is not significantly affected.

LDR: Load Regulation. The change in output voltage for a change in load current at constant chip temperature.

### Typical Performance Characteristics

### **Operation Description**

HL78Lxx is designed with Thermal Overload Protection that shuts down the circuit when subjected to an excessive power overload condition, Internal Short Circuit Protection that limits the maximum current the circuit will pass, and Output Transistor Safe-Area Compensation that reduces the output short circuit current as the voltage across the pass transistor is increased.

In many low current applications, compensation capacitors are not required. However, it is recommended that the regulator input be bypassed with a capacitor if the regulator is connected to the power supply filter with long wire lengths, or if the output load capacitance is large. An input bypass capacitor should be selected to provide good high frequency characteristics to insure stable operation under all load conditions. A  $0.33\mu F$  for larger tantalum, mylar, or other capacitor having low internal impedance at high frequencies should be chosen. The bypass capacitor should be mounted with the shortest possible leads directly across the regulator's input terminals. Normally good construction techniques should be used to minimize ground loops and lead resistance drops since the regulator has no external sense lead.

### **Typical Application**

**Fig.1 Fixed Output Regulator**

A common ground is required between the input and the output voltages. The input voltage must remain typically 2.0 V above the output voltage even during the low point on the input ripple voltage.

- $C_{in}$  is required if regulator is located an appreciable distance from power supply filter.
- $C_o$  is not needed for stability; however, it does improve transient response.

**Fig.2 Constant Current Regulator**

The HL78Lxx regulator can also be used as a current source when connected as Fig.2. In order to minimize dissipation the HL78Lxx is chosen in this application. Resistor R determines the current as follows:

$$I_o = \frac{5V}{R} + I_Q$$

Fig.3 Adjustable Output Regulator

$$V_o = 5V + (5V/R1 + I_Q) * R2$$

$$5V/R1 > 3*I_Q$$
